```python
#Stephen Simpson. Program that acts like a grade calculator
print('Please enter your test score')

score = int(input())

#If statements deciding what letter grade you get based off the score
if score >= 90 :
    grade = "A"
elif score >= 80 :
    grade = "B"
elif score >= 70 :
    grade = "C"
else:
    grade = "F"

#States your score and grade for the test
print(f'With a score of{score: .0f} your grade is {grade:}')
```
